

INNOVATIVE MAGNETIC FIELD-TECHNOLOGY

The Magneto recognises the car park occupancy and records the time for which the parking bay was occupied by a vehicle.

As the vehicle detection system reacts immediately and reliably to any change in parking space usage, it is suitable for outdoor parking spaces and on-street applications and helps to optimise parking space management.

The sensor system is suitable for any outdoor parking space and can be installed in the centre of the car park or at the side of the kerb/sidewalk without having to remove the parked vehicles.

See all the benefits and use of the Magneto here:

The future of parking.

PARKING SPACE MONITORING

For charging stations

For special parking spaces

For emergency vehicles

Digitisation of the parking areas

Your benefits

- Automated monitoring
- Push notification for parking processes
- Installation at ground level possible
- Visualisation of data in real time
- Cost-effective components
- Particularly robust and weather-independent
- Suitable for small and large projects
